

KPI Command Center

Executive performance tracking workbook

Purpose	Track weekly business performance across revenue, volume, conversion, and efficiency KPIs.
Who uses it	Leadership, operations, and analytics teams.
Refresh cadence	Weekly or monthly refresh depending on source data.
Definitions	Gross margin = (Revenue - Cost) / Revenue. Conversion rate = Conversions / Visitors. AOV = Revenue / Orders.
Notes	Tabs flow left to right: Raw_Data (input) -> Calculations (row metrics) -> KPI_Summary (totals) -> Dashboard (one-screen view) -> Assumptions (definitions and targets).

South	-0.8%
East	-15.3%
West	-32.0%

Assumptions and Definitions

Metric definitions

Gross margin

$(\text{Revenue} - \text{Cost}) / \text{Revenue}$

Conversion rate

$\text{Conversions} / \text{Visitors}$

AOV

$\text{Revenue} / \text{Orders}$

WoW change

$\text{This week revenue} / \text{same segment prior week} - 1$

Variance to target

$\text{Actual revenue} / \text{target revenue} - 1$

Company benchmark per channel = mean weekly per-region revenue on that channel. Regions above the benchmark beat target; below miss it.

Weekly revenue target

Region	Channel	Weekly Revenue Target
North	Paid	€3,010
North	Organic	€2,233
South	Paid	€3,010
South	Organic	€2,233
East	Paid	€3,010
East	Organic	€2,233
West	Paid	€3,010
West	Organic	€2,233

Data caveats

Synthetic, deterministic sample data (seed 42). Raw_Data shows a representative recent window; figures illustrate the workbook's mechanics, not a real company.

Formula notes

All metrics are formula-driven from Raw_Data via Calculations. IFERROR guards every division. The targets above (company benchmark per channel) feed Variance to Target: per-week rows on Calculations, and average weekly actual vs weekly benchmark on the Dashboard.
